Prof. Alice Bean
Department of Physics and Astronomy at KU

Prof. Bean shared her research about the experimental particle physics and the project about The Large Hadron Collider in Switzerland, which is one of the largest scientific projects undertaken. She also discussed KU's role in this project and her experiences living in Switzerland with the students from the US. Since she leads a Program in International Research and Education project that brings undergraduate and graduate students to Switzerland for study as well as research, there had been a big interest by the undergraduate students.
